Foreword	iii
Preface	v
Acknowledgements	vii
Conversion Factors	viii
Executive Summary	ix
Section 1: Introduction	1
1.1 Context	1
1.2 The Renewable Energy Policy Environment	2
1.3 The Resource Management Act	3
1.4 Overview of New and Emerging Renewable Energy Technologies	4
1.5 Future Policy Options	10
Section 2: Solar Energy	13
2.1 The Solar Energy Resource	17
2.2 Solar Thermal	21
2.3 Passive Solar in Buildings	33
2.4 Photovoltaic Electricity	45
2.5 Other Solar Conversion Systems	63
2.6 References	67
Annex 2.1 — Developments and Applications of Photovoltaics World-wide	69
Section 3: Bioenergy	71
3.1 Introduction	77
3.2 Woody Biomass	79
3.3 Agricultural Biomass Crops	95
3.4 Municipal Solid Wastes	107
3.5 Dry Biomass Conversion Technologies	127
3.6 Conversion of Wet Biomass	141
3.7 References	149
Section 4: Power from Water	155
4.1 Small Hydro Power	159
4.2 Wave, Tidal and Ocean Current Power	169
4.3 References	189
Annex 4.1 — Potential small hydro schemes in New Zealand	191
Annex 4.2 — Wave data analysis example	201
Section 5: Wind Power Generation	207
5.1 Technology Review	211
5.2 The Current New Zealand Wind Energy Resource and Potential	216
5.3 Environmental and Social Aspects	222
5.4 Economics	224
5.5 Constraints and Opportunities	230
5.6 Further Research	230
5.7 References	231
Section 6: Integrated Energy Systems	233
6.1 Large-scale Integrated Energy Systems	237
6.2 Small-scale Independent Energy Systems	247
6.3 Future Vision	260
6.4 References	261
Annex 6.1 — Procedure for sizing components of a RAPS system	263
