Acknowledgements	iii
1 Introduction	1
1.1 General	1
1.2 Formation of Study Group	1
1.3 Scope of the Guidelines	2
1.4 Summary	2
1.5 Conclusions	3
1.6 References	4
2 Floor Unit Support and Continuity	5
2.1 Introduction	5
2.2 Types of Support for Precast Concrete Floor Units	5
2.3 Precast Floor Unit Seating	7
2.4 Seating Details for Precast Concrete Hollow-core and Flat Slab Floor Units	11
2.5 Types of Support for Ribbed Units	14
2.6 Special Diaphragm Requirements for Hollow-core Floors	15
2.7 Overseas Practice	16
2.8 Related Considerations	16
2.9 Recommendations	17
2.10 References	18
3 Frame Connections	21
3.1 Introduction	21
3.2 System 1 - Precast Beam Units between Columns	21
3.3 System 2 - Precast Beam Units through Columns	26
3.4 System 3 - Precast T or Cruciform Shaped Units	30
3.5 Low Frames with Strong Beam-Weak Column Design	30
3.6 Mixed Precast Prestressed Concrete and Cast-in-place Reinforced Concrete Moment-resisting Frames	30
3.7 Pinned Joints	33
3.8 Composite Reinforced Concrete Moment-resisting Frames of Limited Ductility	34
3.9 Industrial Buildings	35
3.10 Frame Connections in North American and Japanese Practice	35
3.11 Recommendations	35
3.12 References	38
4 Structural Wall Elements	41
4.1 Introduction	41
4.2 Types of Precast Concrete Structural Wall Construction	41
4.3 Monolithic Wall Systems	42
4.4 Jointed Wall Systems	46
4.5 New Zealand Examples	49
4.6 Weathering Details	56
4.7 Recommendations	56
4.8 References	56
5 Diaphragms	59
5.1 Introduction	59
5.2 Requirements of Diaphragms	59
5.3 Internal Restraint Actions in Diaphragms	62
5.4 Analysis and Design of Diaphragms	62
5.5 Interaction of Plastic Hinge Zones and Diaphragms	67

5.6	Overseas Practice	68
5.7	Recommendations	70
5.8	References	71
6	Connections between Precast Concrete Units by Grouted and Welded Bars	73
6.1	General	73
6.2	Selection and Types of Grout	73
6.3	Grouting Situations	74
6.4	Grouting Specific Connections	78
6.5	Quality Assurance	83
6.6	Grouting Workmanship and Construction Aspects	83
6.7	Connections between Precast Elements using Welded Reinforcing Bars	84
6.8	Mechanical Connectors For Splicing Reinforcing Bars	88
6.9	Recommendations	89
6.10	References	89
7	Embedded Steel Connectors	91
7.1	Introduction	91
7.2	Types of Connectors	91
7.3	Selection of Fixings	91
7.4	Structural Actions on Steel Embedments	92
7.5	Design Approach	93
7.6	Design Methods	94
7.7	Detailing of Steel Embedments in Concrete	97
7.8	Recommendations	98
7.9	References	98
8	Tolerances	101
8.1	Introduction	101
8.2	Product Tolerance	101
8.3	Erection Tolerance	101
8.4	Interface Tolerance	104
8.5	Clearances	104
8.6	Implications for Design	104
8.7	Recommendations	104
8.8	References	105
9	Appendices	111
A1	Beam Elongation due to Plastic Hinging	111
A2	Allowances for Effects of Spalling	115
B1	Precast Concrete Frame Connection for System 1 Design Bending Moments	117
B2	Experimental Tests on Precast Concrete Frame Midspan Joint Connections for System 2	119
B3	Laboratory Tests on the Performance of Grouted Connections for System 2	123
C1	Assessing the Influence of Thermal Gradients, Creep and Shrinkage Strains in Composite Concrete Members	125
C2	Method for Locating the Position of Creep and Shrinkage Cracks and Assessing Crack Widths	127
D1	Criteria for the Selection of Fixings	129
D2	Embedments Subject to Corrosion	131
E1	Example Calculation for Embedded Steel Connectors	133
10	Details of Organisations Involved	137
	New Zealand Society for Earthquake Engineering	137
	New Zealand Concrete Society	137
	Centre for Advanced Engineering	138
	Index	139
